

MySafePlay Bridge - Windows Installation Guide

Download and Installation

Step 1: Download the Windows Package

Download the latest Windows package: `mysafeplay-bridge-v1.6.42-alpha.21-windows.zip`

Step 2: Extract the Package

1. Right-click on the downloaded ZIP file
2. Select “Extract All...” or use your preferred extraction tool
3. Extract to a folder like `C:\MySafePlay\` or `C:\Program Files\MySafePlay\`

Windows Security Bypass Instructions

Common Error: “This App Can’t Run on your PC”

This error occurs because the executable is **unsigned** (not digitally signed by Microsoft). This is normal for open-source software and doesn’t indicate a security threat.

Method 1: Windows SmartScreen Bypass

1. **Double-click** the `mysafeplay-bridge-windows.exe` file
2. When you see “Windows protected your PC” dialog:
 - Click **“More info”** (small text link)
 - Click **“Run anyway”** button that appears
3. The application will start normally

Method 2: Windows Defender Exclusion (Recommended)

1. Open **Windows Security** (Windows Defender)
2. Go to **Virus & threat protection**
3. Click **“Manage settings”** under Virus & threat protection settings
4. Scroll down to **Exclusions** and click **“Add or remove exclusions”**
5. Click **“Add an exclusion”** → **“Folder”**
6. Select the folder where you extracted MySafePlay Bridge
7. Click **“Select Folder”**

Method 3: Run as Administrator

1. **Right-click** on `mysafeplay-bridge-windows.exe`
2. Select **“Run as administrator”**
3. Click **“Yes”** when prompted by User Account Control

Running MySafePlay Bridge

First Time Setup

1. Navigate to the extracted folder

2. Double-click `mysafeplay-bridge-windows.exe`
3. If prompted by Windows Firewall, click **“Allow access”**
4. The service will start on `http://localhost:3001`
5. Open your web browser and go to `http://localhost:3001`

Configuration

1. Edit the `config/settings.json` file to customize:
 - Port number (default: 3001)
 - Camera discovery settings
 - Cloud integration settings
 - Security options

Running as a Windows Service (Advanced)

For automatic startup, consider using tools like:

- **NSSM** (Non-Sucking Service Manager)
- **WinSW** (Windows Service Wrapper)
- **PM2** for Windows

Troubleshooting

Issue: “This App Can’t Run on your PC”

Solution: Follow the Windows Security Bypass Instructions above

Issue: Port Already in Use

Solution:

1. Edit `config/settings.json`
2. Change the port from 3001 to another port (e.g., 3002)
3. Restart the application

Issue: Cameras Not Discovered

Solution:

1. Ensure cameras are on the same network
2. Check firewall settings
3. Verify camera ONVIF support
4. Increase discovery timeout in `config/settings.json`

Issue: Windows Firewall Blocking

Solution:

1. Allow the application through Windows Firewall
2. Or temporarily disable Windows Firewall for testing

Issue: Antivirus Software Blocking

Solution:

1. Add the MySafePlay folder to your antivirus exclusions
2. Temporarily disable real-time protection for installation

System Requirements

- **Operating System:** Windows 10 or Windows 11 (64-bit)

- **Architecture:** x64 (64-bit) - Will NOT work on 32-bit systems
- **RAM:** Minimum 2GB, Recommended 4GB+
- **Network:** Local network access to IP cameras
- **Ports:** Default port 3001 (configurable)

Security Notes

Why is the executable unsigned?

- Code signing certificates cost \$300-500+ per year
- This is an open-source project distributed for free
- The source code is available for inspection
- You can build the executable yourself from source

Is it safe to run?

- **Yes** - The executable is built from open-source code
- **Yes** - No malicious code or data collection
- **Yes** - Runs locally on your machine only
- **Optional** - You can review the source code before running

Future Code Signing

We are working on obtaining a code signing certificate to eliminate these security warnings in future releases.

Support

If you encounter issues:

1. Check this troubleshooting guide first
2. Review the main README.md file
3. Check the logs in the `logs/` folder
4. Report issues on our GitHub repository

Updates

To update MySafePlay Bridge:

1. Download the latest Windows package
2. Stop the current service
3. Replace the executable file
4. Restart the service
5. Your configuration files will be preserved

Note: This software is provided “as-is” without warranty. Always run security software and keep your system updated.
